

SIAS 2018

10–12 October / Nancy / France

CALL FOR ABSTRACTS

→ Submission of abstracts by 16 March 2018: sias2018@inrs.fr

→ Information and registration: www.inrs-sias2018.fr

The emergence of new technologies (internet of objects, artificial intelligence, big data, cloud computing, collaborative robotics, mobile robotics, additive manufacturing, augmented reality, etc.) has a profound impact on industry today. Industries of the future, geared towards improvement of performance, have led to increased use of these new technologies. What are the consequences on the safety of industrial automated systems?

The SIAS 2018 conference will provide the opportunity to present the most recent progress incorporating occupational risk prevention in the transformations related to the concept of “industries of the future” as regards engineering (design, simulation tools, risk analysis, prevention measures, etc.) and the importance of humans, who, more than ever, are at the centre of production systems.
